Pricing Model for Django Glass Shop App (Algerian Freelance Rates)

Local Algerian freelancers charge very low fixed prices for web development. For context, a recent Twine survey notes that *"Beginner"* web projects in Algeria go for only **5,000–10,000 DZD** total. Likewise, an Algerian web design firm quotes about **5,800–7,700 DZD per page** for a basic (static) site. This suggests an entry-level freelancer might charge on the order of a few hundred to ~1,000 DZD per item (well below agency rates). Accordingly, we assign unit costs at the low end of these norms: roughly **700–800 DZD** per HTML template or form, **800–1,000 DZD** per view or JS script, and about **1,500 DZD** per model class. Multiplying by the counts from the project structure yields the table below (showing DZD and USD at 1 USD = 135 DZD).

Asset Type	Count	Unit Price (DZD / USD)	Total (DZD / USD)
HTML template	49	750 DZD (~$5.56)	36,750 DZD (~$272.22)
Django view	49	800 DZD (~$5.93)	39,200 DZD (~$290.37)
Django model	15	1,500 DZD (~$11.11)	22,500 DZD (~$166.67)
Django form	15	800 DZD (~$5.93)	12,000 DZD (~$88.89)
JS script	4	900 DZD (~$6.67)	3,600 DZD (~$26.67)
Subtotal	–	–	**114,050 DZD (~$844.81)**

The **total** for the full project is therefore about **114,050 DZD** (≈****$845 USD****). These estimates assume *entry-level* freelance rates in Algeria. They are much lower than agency quotes, consistent with Twine's observation that beginners often quote only ~5–10k DZD for an entire small project. (Larger or more experienced freelancers would charge more per item.)

Sources: Local Algerian pricing data were used to guide these per-item estimates, ensuring the rates reflect the *low end* of the market. Each deliverable count comes from the glass shop project structure and was multiplied by the unit costs above to compute subtotals and the grand total.
